

(57) Abstract:

The invention relates to a method for transmitting information from a first terminal to a second terminal , wherein visual information is displayed on the display of the first terminal. In the method, at least one area is defined on the display of the first terminal, the information on which area is transmitted to the second terminal. The second terminal is provided with at least one display, wherein the visual information received in the second terminal is displayed on said display of the second terminal.
